EXPERIENCE

The Walt Disney Company | Software Engineer II, Santa Monica, CA *May 2024 - Present*

Frontend Software Engineer in DEPT sector, streaming & non-streaming platforms

- Evolve high-scale authentication web experience for streaming and non-streaming platforms, utilizing Next.js and React.js to support millions of users
- Led login and signup error reduction experiments across Disney+ and Hulu, decreasing incorrect email errors by 15%+ and eliminating auth failures via token aware reauthentication
- Architected Magic Link authentication for Google IAP exit on Disney+ and Hulu, achieving 75%+ conversion rate and directly improving profit margins
- Driving Disney+ Roku SDK modernization to maintain platform compliance and performance
- Partner with backend teams to design API contracts, enabling earlier dev completion
- Led Hulu repository migration between GitHub instances, debugged and corrected build.yml pipelines and Dockerfile configuration issues to resolve CI/CD failures on PRs and deployment
- Strategize and drive documentation standards and knowledge sharing practices that accelerate onboarding and reduce cross-team friction
- Maintain 100% unit and E2E test coverage across critical systems to ensure zero regression
- Spearhead engineering process optimizations that improved team delivery efficiency by 30%
- Leverage AI tools (AmazonQ/Claude/Copilot Agent) to accelerate development and code quality
- Collaborate with Product, TPMs, Design, and Analytics to translate strategic initiatives into well-scoped engineering milestones and refined UX flows

General Motors | Software Developer, Austin, TX

February 2022 - April 2024

Full-Stack Software Developer in the CCA sector, GM Plus Austin VP

- Refactored UIV web app from legacy code into microservices using TypeScript/React.js and Java/Quarkus, achieving a 10x performance boost
- Built 8+ features expanding dealer, fulfillment, and European business engagement; streamlined data pipelines using PostgreSQL and Elasticsearch
- Improved WCAG accessibility with breadcrumbs and hamburger navigation; documented each feature to support long-term maintainability
- Collaborated with Product and UX Designers to define sprint goals and deliver on schedule

Intrepid Automation | Software Developer Intern, San Diego, CA

June 2020 - August 2021

Frontend Software Developer

- Led frontend redevelopment of manufacturing site using HTML, JavaScript, CSS, and C# on ASP.Net; used AJAX to reduced page load time and added pagination for 2x faster result display
- Conducted user research that informed quality design enhancements; improved accessibility with breadcrumb and side-menu navigation

PROJECTS

Stardog — Co-team lead, Tech Specialist, Documentation Lead

- Partnered with Stardog to overhaul their documentation site, applying UI/UX research and design methods to improve clarity, navigation, and overall usability

Groupify — Frontend Developer

- Built a web app elevating Spotify's social features (Group Listen Sessions, Recommended Album Banner, Top Songs/Artists, Friends List) using Python, Vue.js, and Bulma

EDUCATION

University of Maryland, College Park

August 2023 - May 2026

Master of Science, Human Computer Interaction (4.0 GPA)

Relevant Courses: HCIM Capstone Project, User Experience Research Methods, Interaction Design Studio, UX Business Basics, Information Ethics

University of California, Santa Cruz

September 2018 - December 2021

Bachelor of Science, Computer Science (3.26 GPA)

Organizations: CruzHacks, Kappa Alpha Theta

SKILLS - Languages

Typescript
JavaScript
HTML
Tailwind
SCSS
CSS
Brightscript
Java
C
C#
Python

SKILLS - Frameworks

Next.js
React.js
